Re: Reply Comments to IB Docket No. 12-340

Dear Ms. Dortch:

Many citizens continue to feel the negative effects of our country's economic downturn. The federal government must continue to be diligent to help Americans achieve economic independence and prosperity. Broadband technologies are one such tool that can drive innovation, promote investment, create competition and ultimately spur economic growth.

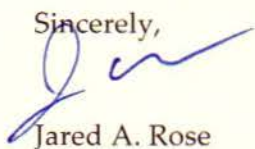

I was pleased to have recently read about the Commission's focus on finding remedies to the looming spectrum crunch we face in this country. It's the scarcity of this finite resource and the need for more efficient use of spectrum that could ultimately help us out of the economic doldrums.

I have become aware about LightSquared, an American company out of Virginia, and its quest to build out a new mobile broadband network. I want to encourage you to support LightSquared's License Modification Application to help make this new wireless broadband network a reality.

LightSquared's proposal to combine its licensed spectrum with other spectrum utilized by the federal government seems like a good path forward to spur innovation and jobs.

I hope you will strongly consider LightSquared's application. Thank you for your consideration.

Sincerely,

Jared A. Rose
